

TWO-THOUSAND FIVE

Manufacturers Spotlight

It Just Makes Sense

Sure you can dig up homes, walkways and landscaping to repair your customers' drain pipes, but why would you?

Offer your customers more — add Nu Flow to your company and see your profits increase. Stay ahead of the competition and give your customers the peace of mind a homeowner should have. Other solutions don't match the quality of Nu Flow's trenchless drain-lining systems.

Why keep visiting your customers time and again for the same reason? Short-term fixes only postpone a permanent solution and make your customers unhappy. Do it right the first time and save you and your customers money.

Nu Flow Technologies is now one of the fastest-growing pipe rehabilitation lining companies, with over 150 licensees in the United States, Canada, Australia and the Caribbean. Nu Flow manufactures its own complete line of products out of a 16,000-sq.-ft., state-of-the-art facility. The products include DOT-approved epoxy resins, lining products, cutters and cleaning tools to fully service the lateral lining industry.

The system is unique and does not require any access pit. Nu Flow has even developed a "push" system that launches from a single point of entry

Look familiar?

with no need for downstream access. The company is constantly improving its products and services. As the licensee base grows, Nu Flow's knowledge grows. "We learn something from everyone we do business with," says Grant Duxbury, Nu Flow's training and installation general manager. "If our clients have a unique challenge, we help them get through it and build on our knowledge base."

Nu Flow can do what many other systems cannot do — stop and start anywhere in the line, repair long vertical down pipes, span void pipe and bridge connections (where re-instatement is impractical), complete sectional repairs with line flow, and so many other specialty jobs that are fully supported by 24/7 tech support. Nu Flow strives to develop products that separate them from all others; one example of this is the recent introduction of its Nu Flex product — a structural felt lining material that is capable of lining around multiple 45 degree and 90 degree pipe bends.

Nu Flow also has its own specialty crew that tackles the tough jobs that may be beyond licensees' expertise. Paul Corneil heads up the Nu Flow Specialty Division and talks about Nu Flow advantages. "I have spent years in this business using inversion technologies, slip lining, and can honestly tell you for 1 1/2-inch to 6-inch pipe, Nu Flow has it all." Paul is currently working on a historical property in downtown Manhattan, New York, providing a solution that is second-to-none.

Nu Flow is the most versatile, affordable pipe rehabilitation technology anywhere and is the right solution for your company.
